Adding and Subtracting Integers – Guided Notes

Adding Integers

- When adding two integers, if the signs are the same, you find the _____ of their absolute values, or you _____ them.

- For example:

$$-10 + (-5) =$$

$$12 + 5 =$$

- When adding two integers, if the signs are different, you find the _____ of their absolute values, or you _____ them.

- For example:

$$-5 + 6 =$$

$$10 + (-17) =$$

Subtracting Integers

- When subtracting two integers, a great strategy to use is to change subtraction into _____, by _____.

- For example:

$$10 - 7 =$$

$$4 - 11 =$$

$$-3 - 4 =$$

$$-5 - (-2) =$$

$$10 - (-3) =$$

$$-4 - (-9) =$$
